

Assignment: 33 Business Layouts

Python Web Development in Hindi

MySirG

1. Set an image as a background on webpage. (Mention the type of layout you will be using)
2. Design a delete button, choose proper color and text on button, keep user interactivity in your mind.
3. We all know, when we design a form , one button is compulsory, that is our **Submit** button, but there is one more button, which is also equally important , which is **Back** button. Create a back button inside the form. Place that button in such a way that user should not be afraid to leave that page on clicking back button.
4. Design a payment page, use a standard layout, that you have experienced over all websites.
 - a. Use Proper color combination
 - b. Give user all the payment options
 - c. Error message and the text should please user to keep going.
 - d. Avoid negative sentiment.
5. Design a filter bar for clothing website. Things you have to keep in mind:
 - a. Use proper color combinations
 - b. Predict all the filters, that customer would be expecting from you.

6. Create a full image screen layout, with big search bar in center. Things you have to keep in mind:

Note: User should focus on search, and image in background. (Choose proper image)

7. Create a full screen video layout, with title and subtitle embedded on it.

Note: Remember title, subtitle and video should support each other and convey proper message about your business.

8. Suppose, you have published some code on GitHub, and you have to create a proper documentation web page for that. (Learn more about code documentation [here](#))

Things, you have to keep in mind:

- Give proper instructions to user about how to use your code.
- Use proper emojis, (avoid images) to keep clarity.
- Clearly mention, about feedback and support you will be giving to user, if he/she faces problem with your code.

9. Design a 404 Not found page, things you have to keep in mind:

- a. Give user a clear message, that the resource which he/she is trying to request is not available.
- b. Use words to keep user engaged on your website, so that he/she should not leave your website immediately.

- c. Give user options to redirect him/her on different web page.
10. Design a toast notification, with an error message, things you have to keep in mind:
- a. Don't use negative words
 - b. Clearly mention the error so that the user knows what to correct.
 - c. Give user a hint to solve the error.
 - d. Put the blame on yourself and not on the user.
